

# Openfire Enterprise End of Life FAQ

---

The Openfire Enterprise extensions are becoming Opensource. This FAQ is in progress. Please pardon our construction work.

?

## Components that will be Open Source

?

- ???Chat and group chat archiving
- ???Reporting
- ???Sparkweb
- ???Fastpath
- ???Client control

?

## h4 Components that will not be Open Source

?

- ???Clustering -- the clustering module relies on a commercial 3rd party component and cannot be made Open Source. We do not currently have a way to purchase clustering as a standalone module, but are examining options. Please contact us if clustering is crucial for your project.
- ???Spark Skinning service -- there's no easy way to make this service open source and it relies on commercial software to function. We hope to add more customizations options to SparkWeb in the future, which should be a good substitute. We'll continue to run the Spark Skinning service for customers under support contracts.
