Hi I think I found a issue in that method. In that when the node is set the iq message send do not have the node attribute in the query element. i have check out the source code and did a 'fix' by doing from this:

```
getNode().parentNode.attributes.node = val
```

to:

```
getNode().attributes.node = val;
```

If this is a viable fix for you can I have that committed to your SVN? So I don't have to maintain it.

Thanks

Charlie

Hi Charlie,

I'll add this to JIRA now.

bug in DiscoExtension.serviceNode

Sean
