

Lost group chat messages after restart

Hi all,

I'm not sure if this is bug in my setup, instalation Openfire or if this is normal - I have a lot of pernament group chats with messages. After restart all group chats are ampty - all messages disappear, standart chat history is fine, all messages are there. Is there any way how to setup Openfire server to keep these messages?

I use Openfire 3.6.4 and Debian, database HSQL Database Engine 1.8.0, restart was standart, not hard restart etc..

Thank you in advance for any reply.

Bob
